# Triplet

Herbicide

**Triplet herbicide is a broadleaf herbicide containing 280 g/L MCPA, 140 g/L Bromoxynil and 40 g/L Dicamba. It is registered for the control of a broad range of dicot weeds in a range of recreational turf situations**

## MODE OF ACTION

Bromoxynil, one of the active ingredients in Triplet is a fast-acting nitrile herbicide that works on contact by inhibiting photosynthesis in the target plants. The compound is readily absorbed into leaves with little to no downward movement to other plant parts. Susceptible weeds quickly die from the build up of molecules that destroy cell membranes.

The other two actives in Triplet are MCPA and Dicamba. these active ingredients are hormone-type selective herbicides in the phenoxy category. MCPA and Dicamba provide systemic activity through leaf and root absorption. Translocation occurs, with accumulation at the meristematic regions of shoots and roots leading to uncontrolled growth, twisting, thickening, elongation, and eventually death as the weed literally grows itself to death.

## APPLICATION

Triplet Herbicide is applied at a rate of 5 L/ha (50 mL/100 m<sup>2</sup>). For optimum results it is best to apply to actively growing weeds. Ideally, do not mow the turf for two days prior to and following the application. Fertilisation should be avoided following application for a period of two weeks. In warm conditions (temperatures over 30 degrees) application of Triplet may cause browning of turf, particularly to Paspalum sp.

## FEATURES

- Proven performance over many years
- Controls a very broad range of weeds
- Quick control – knocks over weeds in 7–14 days
- Cost effective form of broadleaf weed control
- Dual modes of action for more effective weed control

## OTHER TURF PRODUCTS WITHIN RANGE

|                 |  |
|-----------------|--|
| <b>Twin</b>     | Twin Herbicide is a broadleaf herbicide containing 340 g/L MCPA and 89 g/L Dicamba. It is registered for the control of a very board range of dicot weeds in turf and several herbaceous weeds in general non crop situations.   |
| <b>Javelin</b>  | Javelin is a selective broadleaf post emergent herbicide containing 20 g/L Clopyralid, 15 g/L Diflufenican and 300 g/L MCPA (Potassium salt). It is a turf specific registered product for the control of a broad range of dicot weeds on most turfgrass varieties.  |
| <b>Big Foot</b> | Big Foot is a highly concentrated blue spray pattern indicator dye ideal for effective marking of spray solutions. It is safe, convenient and economical. It can be used with herbicides, fungicides, insecticides and most other crop care chemicals. Suitable for used with all water based spray mixtures. It clearly indicates where the spray has gone. |
