

Lynx[®] WG

A herbicide for the control of broadleaf weeds

globe
GROWING SOLUTIONS

GROUP

B

HERBICIDE

Active ingredients 600g/kg metsulfuron methyl

Pack size 500gm

For the control of certain broadleaved weeds in winter cereal crops and broadleaved weeds and brush species in pastures, rights of ways, commercial and industrial areas.

General instructions

Apply early post crop emergence when weeds are small (i.e. no greater than 5 cm in height or diameter) and actively growing.

Best weed control is obtained when soil has been moistened to a depth of 5 to 7.5 cm within 4 weeks of application.

Results may be slow to observe where treatment is delayed or where weeds are not actively growing due to adverse conditions. Weeds may be only stunted or suppressed.

After application for post-emergent weed control, LYNX WG will remain in the soil for a period of time. The persistence of LYNX WG in the soil is dependent on various environmental conditions, e.g. soil pH, temperature, soil moisture and organic matter. Wet, warm, acid soils high in organic matter favour breakdown of LYNX WG in the soil.

It should be noted that LYNX WG does NOT provide soil residual control.

Crops other than wheat, barley, triticale and cereal rye may be extremely sensitive to low concentrations of LYNX WG residues in the sprayer or in the soil.

For weed resistance management Lynx WG is a group B herbicide.

Group B Herbicides inhibit the acetolactate synthase (ALS) enzyme in the plant.

Inhibition leads to the depletion of key branch-chained amino acids necessary for protein synthesis and plant growth.
